CONTENTS
1. Introduction 291

11. Antioxidation of Emulsified Lipids 299

10. Incorporation of Liposomes 303

9. Applications of Liposomes 307

8. Formulation 311

7. Characterization of Liposomes 315

6. Membrane Flow & Function 319

5. Membrane Traffic, Lipid Transfer & Metabolism 323

4. Lipids & Life: Lessons of History 327

3. Lipid-Mediated Signals 331

2. Lipid-Cell Interactions 335

1. Lipid Signaling 339

Preface

During the months when we spent more time in the library than at home,
the idea of starting the publication was born. We decided to pool our
resources and work together to produce a book, "The Biological
Function of the Hair," that would reflect our joint expertise and
research interests. This book aims to provide a comprehensive
overview of the biological function of hair, encompassing various
aspects such as its structure, growth, and biophysical properties.

We express our gratitude to the authors for their contributions and
their patience in working with each other. This volume is a
reflection of our combined efforts and dedication.

The contributors have been selected to ensure a wide range of
expertise and perspectives, resulting in a diverse collection of
chapters. Each chapter delves into a specific aspect of hair
biology, providing insights into the latest research and theories.

This volume is dedicated to the researchers who have contributed
to our understanding of hair biology, and we hope it will serve
as a valuable resource for future studies.

J. D. Smith, President

Acknowledgments

The publishers would like to extend their gratitude to the
teachers, researchers, and students who have contributed
to the field of hair biology. Special thanks are due to the
scientists and educators who have provided valuable
insights and feedback during the preparation of this
volume.
